## Improvements:

This document has relevant information regarding all the improvements made to the website (Spacebotics) which includes external styling of the website using CSS code language for user experience and visual appearance.

Before the website only consists of html tags with minimum internal styling but has been improved with extensive external style which is shown below:

- **Table Deletion & Box Model Transition:** Replaced rigid HTML table structures with div container box (.box-left, .box-right) to ensure, precise content alignment.
- **Navigation Menu Refinement:** Implemented uniform horizontal spacing (margin: 0 10px;) between navigation links (nav a, nav details) to have a proper space in between the links as they were too close to one another.
- **ID and Group Selectors:** Implemented id select as they function like a variable name, contain lines of code (block) so the CSS code gets implemented to the correct place, works like a link of where styling must be implemented.
- **Background colour and font colour:** implement base name for colour such as “black” and “white” while the horizontal line is “grey”
- **Content alignment:** adjusted the content in a box and aligned main content on the body left and right, some images and text are aligned together in the same box with image on the left hand-side and text on the right-hand side. Content on the footer and header are all centred and share the same ID selector name to reuse already written CSS code
- **Changed the hyperlinks font colour** from the default blue to white and added a nav tag for them
- **Typography:** Arial, sans-serif
